Granulated Blast Furnace Slag
Safety Data Sheet (SDS)
USS IHS Number: 75687
Locations: Fairfield, Gary and Lake Erie
Original: 12/16/2010 Revision: 07/01/2017 Expiration: 07/01/2020

Section 1 – Identification

1(a) Product Identifier used on Label: Granulated Blast Furnace Slag
1(b) Other Means of Identification: Granulated Slag
1(c) Recommended use of the chemical and restrictions on use: None
1(d) Name, Address, and Telephone Number:
   United States Steel Corporation
   600 Grant Street, Room 1662
   Pittsburgh, PA 15219-2800
   Phone number: (412) 433-6840 (8:00 am to 5:00 pm)
   FAX: (412) 433-5019
1(e) Emergency Phone Number: 1-800-262-8200 (CHEMTREC)

Section 2 – Hazard(s) Identification

2(b) Signal Word, Hazard Statement(s), Symbols and Precautionary Statement(s):

<table>
<thead>
<tr>

The following components comprise this Granulated Blast Furnace Slag product and were used for hazard determination:

| Metallic Silicates and Aluminosilicates* | Various | Various | 94-100 |
| Iron Oxides | 1345-25-1 | 215-721-8 | 0.4-2.6 |
| | 1309-37-1 | 215-168-2 | |
| Calcium Sulfide | 20548-54-3 | 234-873-5 | 2-4 |

EC - European Community
CAS - Chemical Abstract Service
* The majority of components in Granulated Blast Furnace Slag are various glassy Metallic Silicates (Iron, Calcium, Magnesium, Aluminum, and Titanium Silicates), including: Dicalcium Silicate (Ca$_2$SiO$_4$) 14284-23-2, Merwinite (Ca$_3$Mg$_2$Si$_2$O$_8$) 13813-64-4, and Gehlenite (Ca$_2$Al$_2$SiO$_7$) 1302-56-3.

Section 4 – First-aid Measures

4(a) Description of Necessary Measures:
- **Inhalation** Remove person to fresh air and keep comfortable for breathing. Get medical advice/attention if you feel unwell.
**Section 4 – First-aid Measures (continued)**

4(a) Description of Necessary Measures (continued):
- **Eye Contact:** Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical advice/attention if you feel unwell.
- **Skin Contact:** If skin irritation occurs: Get medical advice/attention.
- **Ingestion:** Get medical advice/attention if you feel unwell.

4(b) Most Important Symptoms/Effects, Acute and Delayed (Chronic):
- **Acute effects:**
  - **Inhalation:** Excessive exposure to high concentrations of dust may cause irritation to the eyes, skin and mucous membranes of the upper respiratory tract.
  - **Eye:** Excessive exposure to high concentrations of dust may cause irritation to the eyes.
  - **Skin:** Skin contact with dusts may cause irritation or dermatitis.
  - **Ingestion:** Ingestion of dust may cause nausea and/or vomiting.

4(c) Immediate Medical Attention and Special Treatment: Treat symptomatically.

**Section 5 – Fire-fighting Measures**

5(a) Suitable (and Unsuitable) Extinguishing Media: Use extinguishers appropriate for surrounding materials.

5(b) Specific Hazards Arising from the Chemical: Not applicable for solid product.

5(c) Special Protective Equipment and Precautions for Fire-fighters: Self-contained NIOSH approved respiratory protection and full protective clothing should be worn when flames and/or smoke from fire are present. Heat and flames cause emittance of acrid smoke and fumes. Do not release runoff from fire control methods into sewers or waterways. Firefighters should wear full face-piece self-contained breathing apparatus and chemical protective clothing with thermal protection. Direct water stream will scatter and spread flames and, therefore, should not be used.

**Section 6 - Accidental Release Measures**

6(a) Personal Precautions, Protective Equipment and Emergency Procedures: For spills involving finely divided particles, clean-up personnel should be protected against contact with eyes and skin. If material is in a dry state, avoid inhalation of dust. Personnel should be protected against contact with eyes and skin. Fine, dry material should be removed by vacuuming or wet sweeping methods to prevent spreading of dust. Avoid using compressed air. Do not release into sewers or waterways.

6(b) Methods and Materials for Containment and Clean Up: Collect material in appropriate, labeled containers for recovery or disposal in accordance with federal, state, and local regulations. Follow applicable OSHA regulations (29 CFR 1910.120) and all other pertinent state and federal requirements.

**Section 7 - Handling and Storage**

7(a) Precautions for Safe Handling: Operations with the potential for generating high concentrations of airborne particulates should be evaluated and controlled as necessary. Practice good housekeeping. Do not breathe metal fumes and/or dust. Emergency safety showers and eye wash stations should be present.

7(b) Conditions for Safe Storage, Including any Incompatibilities: Store away from incompatible materials.

**Section 8 - Exposure Controls / Personal Protection**

8(a) Occupational Exposure Limits (OELs): The following exposure limits are offered as reference, for an experienced industrial hygienist to review.

NE - None Established

1. OSHA PELs (Permissible Exposure Limits) are 8-hour TWA (time-weighted average) concentrations unless otherwise noted. A ("C") designation denotes a ceiling limit, which should not be exceeded during any part of the working exposure unless otherwise noted. An Action level (AL) is used by OSHA and NIOSH to express a health or physical hazard. They indicate the level of a harmful or toxic substance/activity, which requires medical surveillance, increased industrial hygiene monitoring, or biological monitoring. Action Levels are generally set at one half of the PEL but the actual level may vary from standard to standard. The intent is to identify a level at which the vast majority of randomly sampled exposures will be below the PEL.

2. Threshold Limit Values (TLV) established by the American Conference of Governmental Industrial Hygienists (ACGIH) are 8-hour TWA concentrations unless otherwise noted. ACGIH TLVs are for guideline purposes only and as such are not legal, regulatory limits for compliance purposes. A Short Term Exposure Limit (STEL) is defined as the maximum concentration to which workers can be exposed for a short period of time (15 minutes) for only four times throughout the day with at least one hour between exposures.
Granulated Blast Furnace Slag

USS IHS No.: 75687  Rev. 7/17

Section 8 - Exposure Controls / Personal Protection (continued):

8(a) Occupational Exposure Limits (OELs)(continued):

3. The National Institute for Occupational Safety and Health Recommended Exposure Limits (NIOSH-REL) - Compendium of Policy and Statements. NIOSH, Cincinnati, OH (1992). NIOSH is the federal agency designated to conduct research relative to occupational safety and health. As is the case with ACGIH TLVs, NIOSH RELs are for guideline purposes only and as such are not legal, regulatory limits for compliance purposes.

4. The "immediately dangerous to life or health air concentration values (IDLHs)" are used by NIOSH as part of the respirator selection criteria and were first developed in the mid-1970s by NIOSH. The Documentation for Immediately Dangerous to Life or Health Concentrations (IDLHs) is a compilation of the rationale and sources of information used by NIOSH during the original determination of 387 IDLHs and their subsequent review and revision in 1994.

5. PNOR (Particulates Not Otherwise Regulated). All inert or nuisance dusts, whether mineral, inorganic, or organic, not listed specifically by substance name are covered by a limit which is the same as the inert or nuisance dust limit of 15 mg/m³ for total dust and 5 mg/m³ for the respirable fraction.

6. Inhaled fraction. The concentration of inhalable particulate for the application of this TLV is to be determined from the fraction passing a size-selector with the characteristics defined in ACGIH 2017 TLVs ° and BEIs ° (Biological Exposure Indices) Appendix D, paragraph A.

7. PNOS (Particulates Not Otherwise Specified). Particulates identified under the PNOS heading are “nuisance dusts” containing no asbestos and <1% crystalline silica.

8. Respirable fraction. The concentration of respirable dust for the application of this limit is to be determined from the fraction passing a size-selector with the characteristics defined in ACGIH 2017 TLVs ° and BEIs ° Appendix D, paragraph C.

8(b) Appropriate Engineering Controls: Local exhaust ventilation should be used to control the emission of air contaminants. General dilution ventilation may assist with the reduction of air contaminant concentrations. Emergency eye wash stations and deluge safety showers should be available in the work area.

8(c) Individual Protection Measures:

- Respiratory Protection: Seek professional advice prior to respirator selection and use. Follow OSHA respirator regulations (29 CFR 1910.134) and, if necessary, use only a NIOSH-approved respirator. Select respirator based on its suitability to provide adequate worker protection for given working conditions, level of airborne contamination, and presence of sufficient oxygen. Concentration in air of the various contaminants determines the extent of respiratory protection needed. Half-face, negative-pressure, air-purifying respirator equipped with P100 filter is acceptable for concentrations up to 10 times the exposure limit. Full-face, negative-pressure, air-purifying respirator equipped with P100 filter is acceptable for concentrations up to 50 times the exposure limit. Protection by air-purifying negative-pressure and powered air respirators is limited. Use a positive-pressure-demand, full-face, supplied air respirator or self contained breathing apparatus (SCBA) for concentrations above 50 times the exposure limit. If exposure is above the IDLH (immediately dangerous to life or health) for any of the constituents, or there is a possibility of an uncontrolled release or exposure levels are unknown, then use a positive-demand, full-face, supplied air respirator with escape bottle or SCBA.

Warning! Air-purifying respirators both negative-pressure, and powered-air do not protect workers in oxygen-deficient atmospheres.

- Eyes: Wear eye protection/face protection. A face shield should be used when appropriate to prevent contact with splashed materials. Chemical goggles, face shields or glasses should be worn to prevent eye contact. Contact lenses should not be worn where industrial exposure to this material is likely.

- Skin: Persons handling this product should wear appropriate clothing to prevent skin contact. Wear protective gloves.

- Other protective equipment: An eyewash fountain and deluge shower should be readily available in the work area.

Section 9 - Physical and Chemical Properties

9(a) Appearance (physical state, color, etc.): Light to dark, glassy
9(b) Odor: slight sulfur odor
9(c) Odor Threshold: NA
9(d) pH: NA
9(e) Melting Point/Freezing Point: ~ 2600°F
9(f) Initial Boiling Point and Boiling Range: NA
9(g) Flash Point: NA
9(h) Evaporation Rate: NA
9(i) Flammability (solid, gas): Not flammable
9(j) Upper/Lower Flammability or Explosive Limits: NA
9(k) Vapor Pressure: NA
9(l) Vapor Density (Air = 1): NA
9(m) Relative Density: NA
9(n) Solubility(ies): Insoluble
9(o) Partition Coefficient n-octanol/water: NA
9(p) Auto-ignition Temperature: ND
9(q) Decomposition Temperature: ND
9(r) Viscosity: ND

NA - Not Applicable
ND - Not Determined for product as a whole

Section 10 - Stability and Reactivity

10(a) Reactivity: Not Determined (ND)
10(b) Chemical Stability: Granulated Blast Furnace Slag is stable under normal storage and handling conditions.
10(c) Possibility of Hazardous Reaction: None Known
10(d) Conditions to Avoid: Unintentional contact with water and acids.
10(e) Incompatible Materials: Acids, ammonium salts and aluminum metal.
10(f) Hazardous Decomposition Products: Hydrogen sulfide gas may be released when moist or wet when it is heated. Can react with water to form calcium hydroxide.
Section 11 - Toxicological Information

11(a-e) Information on Toxicological Effects: The following toxicity data has been determined for Granulated Blast Furnace Slag by using the information available for its components applied to the guidance on the preparation of an SDS under the GHS requirements of OSHA and the EU CPL.

<table>
<thead>

* NR Not Rated - Available data does not meet criteria for classification.

The Toxicological data listed below are presented regardless to classification criteria. Individual hazard classification categories where the toxicological information has met or exceeded a classification criteria threshold are listed above.

a. No LC50 or LD50 has been established for Granulated Blast Furnace Slag. The following data has been determined for the components:
   - Iron Oxide: LD50 > 10,000 mg/kg (Oral/Rat)

b. No Skin (Dermal) Irritation data available for Granulated Blast Furnace Slag as a mixture. The following Skin (Dermal) Irritation data has been determined for the components:
   - Iron Oxide: Moderately irritating.
   - Merwinitie: Causes mild skin irritation.
   - Calcium Sulfide: Causes skin irritation.

c. No Eye Irritation data available for Granulated Blast Furnace Slag as a mixture. The following Eye Irritation information was found for the components:
   - Iron Oxide: Severely irritating; may cause burns. Human Corrosive (IUCLID)
   - Merwinitie: Causes eye irritation.
   - Calcium Sulfide: Causes eye irritation.

d. No Skin (Dermal)/Respiratory Sensitization data available for Granulated Blast Furnace Slag as a mixture or its individual components.

e. No Aspiration Hazard data available for Granulated Blast Furnace Slag as a mixture or its individual components.

f. No Germ Cell Mutagenicity data available for Granulated Blast Furnace Slag as a mixture or its individual components.

g. Carcinogenicity: IARC, NTP, and OSHA do not list Granulated Blast Furnace Slag as carcinogens. The following Carcinogenicity information was found for the components:

h. No Toxic Reproduction data available for Granulated Blast Furnace Slag as a mixture or its individual components.

i. No Specific Target Organ Toxicity (STOT) following a Single Exposure data available for Granulated Blast Furnace Slag as a mixture. The following STOT following a Single Exposure data was found for the components:

j. No Specific Target Organ Toxicity (STOT) following Repeated Exposure data was available for Granulated Blast Furnace Slag as a whole. The following STOT following Repeated Exposure data was found for the components:
   - Iron Oxide: Some pulmonary and lung effects reported.

The above toxicity information was determined from available scientific sources to illustrate the prevailing posture of the scientific community. The scientific resources include: The American Conference of Governmental Industrial Hygienist (ACGIH) Documentation of the Threshold Limit Values (TLVs) and Biological Exposure indices (BEIs) with Other Worldwide Occupational Exposure Values 2017, The International Agency for Research on Cancer (IARC), The National Toxicology Program (NTP) updated documentation, the World Health Organization (WHO) and other available resources, the International Uniform Chemical Information Database (IUCLID), European Union Risk Assessment Report (EU-RAR), Concise International Chemical Assessment Documents (CICAD), European Union Scientific Committee for Occupational Exposure Limits (EU-SHOEEL), Agency for Toxic Substances and Disease Registry (ATSDR), Hazardous Substance Data Bank (HSDB), and International Programme on Chemical Safety (IPCS).

The following health hazard information is provided regardless to classification criteria and is based on the individual component(s):

Acute Effects by Component:
   - METALLIC SILICATES: Magnesium Silicate may irritate the eyes. Potassium Silicate may be harmful if swallowed or contacts skin. Calcium silicate may be harmful if swallowed.
   - IRON OXIDE: Contact with iron oxide has been reported to cause skin irritation and serious eye damage.
   - CALCIUM SULFIDE: Causes skin irritation, eye irritation and may cause respiratory irritation.

Delayed (chronic) Effects by Component:
   - METALLIC SILICATES: Magnesium and Potassium Silicates are suspected of causing cancer by inhalation. Lifetime inhalation exposure of rats and mice to atmospheres of magnesium silicate resulted in interstitial fibrosis of the lung and reduced pulmonary function in rats at >= 6 mg/m³. Calcium Silicate exposure to Wollastonite miners suggests that occupational exposure can cause impaired respiratory function and pneumoconiosis.
   - IRON OXIDE: Chronic inhalation of excessive concentrations of iron oxide fumes or dusts may result in the development of a benign lung disease, called siderosis, which is observable as an X-ray change. No physical impairment of lung function has been associated with siderosis. Inhalation of excessive concentrations of ferric oxide may enhance the risk of lung cancer development in workers exposed to pulmonary carcinogens. Iron oxide is listed as a Group 3 (not classifiable) carcinogen by the International Agency for Research on Cancer (IARC).
   - CALCIUM SULFIDE: Not Reported/ Not Classified
Granulated Blast Furnace Slag

USS IHS No.: 75687
Rev. 7/17

Section 12 - Ecological Information

12(a) Ecotoxicity (aquatic & terrestrial): No data available for the product, Blast Furnace Slag as a whole. However, individual components of the product have been found to be toxic to the environment. The following may migrate into soil and groundwater and be ingested by wildlife.
- Calcium Sulfide: EU RAR lists as Category 1 Very toxic to aquatic life with long lasting effects.

12(b) Persistence & Degradability: No Data Available
12(c) Bioaccumulative Potential: No Data Available
12(d) Mobility (in soil): No Data Available
12(e) Other Adverse Effects: None Known

Additional Information:
- Hazard Category: Category 1 Chronic to the Aquatic Environment
- Signal Word: Warning

Hazard Category: Category 1 Chronic to the Aquatic Environment

Hazard Symbol:

Hazard Statement: Very Toxic to aquatic life with long lasting effects.

Section 13 - Disposal Considerations

Disposal: Dispose of contents/container in accordance with local/regional/international regulations.

Please note this information is for Granulated Blast Furnace Slag in its original form. Any alterations can void this information.

Section 14 - Transport Information

14 (a-g) Transportation Information:

US Department of Transportation (DOT) under 49 CFR 172.101 does not regulate Granulated Blast Furnace Slag as a hazardous material. All federal, state, and local laws and regulations that apply to the transport of this type of material must be adhered to.

Section 15 - Regulatory Information

Regulatory Information: The following listing of regulations relating to a U. S. Steel product may not be complete and should not be solely relied upon for all regulatory compliance responsibilities. This product and/or its constituents are subject to the following regulations:

SARA Potential Hazard Categories: Immediate Acute Health Hazard, Delayed Chronic Health Hazard.

Section 313 Supplier Notification: The product, Granulated Blast Furnace Slag does not contain any of the toxic chemicals subject to the reporting requirements of section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 and 40 CFR part 372.

State Regulations: The product, Granulated Blast Furnace Slag as a whole is not listed in any state regulations. However, individual components of the product are listed in various state regulations:

California Prop. 65: The product may possibly contain trace quantities (generally much less than 0.1%) of metallic elements known to the State of California to cause cancer or reproductive toxicity.

Other Regulations:

WHMIS Classification (Canadian): The product, Granulated Blast Furnace Slag is not listed as a whole. However individual components are listed.
